

Dear Hiring Manager,

I am writing to apply for the Software engineer position. As an engineer with more than four years of experience with coding and project development, I believe I can add value to your team and help your organization accomplish its goals.

I started coding when I was 12 with C#. I created desktop applications many times. Even I completed an Udemy course when I was 14. After that, I wondered how to develop web applications then I learned javascript/HTML/CSS. I created various websites also using PHP. After a while, I wonder about building mobile apps. Firstly I tried to develop apps with Java in the Android studio when I was 16, but because of my pc and some reasons, I can't continue. I learned to build React native apps after one year and started to develop Android/iOS apps. I was also curious about artificial intelligence. When I was 18, I created an ai camera project with Python and won a Turkey software award. I started working at Ideallco as a mobile developer in 2021. I was also entitled to study at Ecole 42 in the same year. Also about two years, I can develop C and C++ applications. I have experience in almost every field due to my curiosity. I had a rack server in my home. I have experience with Linux (Centos, Debian, Ubuntu), Nginx, Apache, LiteSpeed, OpenLiteSpeed, Cpanel, Plesk, VestaCp, CentosCP, etc. Last year in my company, I developed WebRTC infrastructure with Janus gateway. In my latest project, I built a strong video call application (web and mobile) with React and React Native. I used node.js for the backend and C language for the video optimization. These days I am working on building performance apps on Kubernetes and Docker. I have always taken care to produce quality and clean code.

I am a fast learner and curious about new things. I am always ready to easily adapt and support any situation that may develop at the point of need. I am grateful that you have taken the time to consider me for the position. Please get in touch with me if you have questions or want to discuss my candidacy further.

Sincerely,  
Mustafa COSAR
